

# silviolleite/laravel-pwa vs erag/laravel-pwa

Both

`silviolleite/laravel-pwa` and `erag/laravel-pwa` are popular packages for integrating PWA features into Laravel, but `erag/laravel-pwa` is a more modern, maintained, and feature-rich option, especially for recent Laravel versions.

## Feature Comparison

	Feature	
	<code>silviolleite/laravel-pwa</code>	<code>erag/laravel-pwa</code>
<b>Current Maintenance</b>	Less actively maintained; recent activity involved pull request merges rather than significant feature additions.	Actively maintained with recent updates and new features.
<b>Laravel Support</b>	Primarily supports older versions of Laravel (e.g., Laravel 5.x through 8.x).	Supports modern Laravel 8, 9, 10, 11, and 12.
<b>Setup &amp; Commands</b>	Requires manual publishing of configuration files and a standard <code>vendor:publish</code> command.	Offers a streamlined <code>php artisan erag:install-pwa</code> command for easier setup and an <code>erag:pwa-update-manifest</code> command for updating.
<b>Key Functionality</b>	A basic implementation that generates the necessary manifest and service worker files, but may require manual adjustments for specific use cases (e.g., in local environments).	Automatically generates <code>manifest.json</code> and <code>service-worker.js</code> , includes Blade directives, and supports dynamic features like an install button and logo changes.
<b>Frontend Integration</b>	General Laravel support.	Explicitly works well with modern stacks like Vue.js and React.js.

## Summary

- Use `erag/laravel-pwa` if you are using a recent version of Laravel (8+) and want a well-maintained, modern package with easy installation and advanced features.
- Use `silviolleite/laravel-pwa` only if you are working with a legacy Laravel application and need a simple, basic PWA implementation.

You can find more details and installation instructions on the respective GitHub pages:
