

# Creating new masonite project using python 3.8.5

## First confirm the version

```
/www/server/python_manager/versions/3.8.5/bin/python3 --version
```

## Setup the python 3.8.5 virtual environment

```
/www/server/python_manager/versions/3.8.5/bin/python3 -m venv <environmentname>
```

## Activate the environment

```
source <environmentname>/bin/activate
```

## Install the core Masonite framework

```
pip install masonite
```

## Create your project

```
project start <projectfoldername>  
cd <projectfoldername>  
project install
```

## Run your project

```
python craft serve
```

You can create this in the same way by switching to another Python version available on your system.
